

Listing AutomatEr

Your inventory. Your agents' names. Facebook Marketplace, on a schedule.

Listing AutomatEr is a desktop app for real estate agents. It posts the listings an agent has permission to market to Facebook Marketplace on a schedule the agent sets.

Every post carries your attribution, written by the app:

Marketed by [Agent Name]
Listing courtesy of [Brokerage Name]
This is not my listing. I am marketing it on behalf of [Brokerage Name].

Permission first. The app posts only listings the agent is permitted to market: your office's inventory under your rules, and other brokerages' listings only with that broker's permission. Permission is the agent's responsibility. The app handles the attribution and the disclosure.

What your agents get: more conversations from listings that already exist. Buyers message the agent directly about the home.

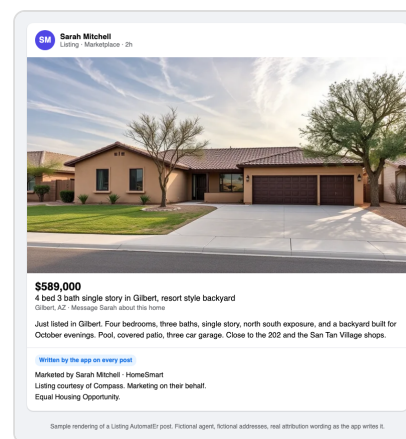

Pricing: per agent, monthly, cancel anytime, free trial to start. Current price at listingautomater.com/#pricing. No refunds.

Try it: listingautomater.com/trial, enter the rep's code, shaped like REP-NAME07, at checkout.
